Exercise 3.5: Stage 3 - First Steps
POSSE - June 2013

Goal

Now that you know your target course and the HFOSS project you wish to use in your course, it's time to work with other POSSE members to develop a plan for incorporating HFOSS next year.

Expected Outcome

At the end of this exercise participants should:

- Have a list of members who will participate in your Stage 3 group.
- Develop a plan for communicating amongst the group.
- Develop a list of tasks to be accomplished and a timeline for achieving them.
- Have discussed which module(s)/components within the project you would like to work on.

Exercise Steps

Please provide the information below on the foss2serve.org wiki

1. Name the HFOSS project you plan to work on.
2. List the participants in your Stage 3 group.
3. List the modules/components of that HFOSS project that people plan to work on.
4. How do you plan to communicate as a group? What tools will you use? How often to do expect to interact?
5. If people are working on different modules/components how might this be incorporated into the group dynamics? How can you still help each other?
6. Do you expect your group to focus more on the project and how it works or on the pedagogy of incorporating HFOSS into the classroom or both?
7. For each member of the group, list one or two goals defining how you would like to incorporate HFOSS into your curriculum in the next year.
8. What are the first specific objectives of your group? (things like downloading, installing, etc.)
9. Add a timeline to this list of goals.
